### Tilt-up Welding Inspection

Inspected joint preparation, fit-up and welding of typical chord bar and weld plate connections for tilt-up panels.

Certified welders were observed for proper welding

procedures and techniques.

Completed welds were inspected for size, length, location and quality and unless otherwise noted were found in accordance with applicable drawings, details noted, sections and building specifications.

5/16

Visually inspected the welding of all panels.

This report concludes the welding inspection for this project.

## CITY OF CARLSBAD POLICIES AND PROCEDURES

NUMBER 84-35	SUBJECT	ROOF DRAINS	APR 0 6 1984
EFFECTIVE March, 1984	SECTION.	BUILDING DEPARTMENT	CHESAPEANE OR
SUPERSEDES.April, 1978			c.m

PURPOSE

Aid in property damage prevention caused by plugged rain drains. Overflow drains to serve as an indicator.

BACK-GROUND: Inspection of damaged and ruined property during heavy rains indicated to the Building department that foliage and debris was stopping up the main roof drains. The water level would rise to the overflow drain level then the debris would float to and stop up the overflow drains. The water would rise to the level of flashings or roof jack then the water would pour down through the structure.

It was concluded that if the owner, occupant or maintenance personnel could become aware of a roof drain stoppage, immediate action could be taken to clear the roof drains.

**ROOF DRAINS - SECTION 3207** 

(c) OVERFLOW DRAINS AND SCUPPERS. Where roof drains are required, overflow drains having the same size as the roof drains shall be installed with the inlet flow line located 2 inches above the low point of the roof, or overflow scuppers having three times the size of the roof drains may be installed in adjacent parapet walls with the inlet flow line located 2 inches above the low point of the adjacent roof and having a minimum opening height of 4 inches. Overflow drains shall be connected to drain lines independent from the roof drains.

POLICY

(overflow drains shall terminate so the overflow drains will also serve as an indicator of a roof drain problem). Overflow drains shall terminate in an area where it will be readily visible and will not cause damage to the building. RECOMMENDED TERMINATION LOCATION:

- Where roof drains terminate through a wall, overflow drains will terminate a minimum of 12 inches above the roof drain.
- 2. When roof drains are piped to an approved underground storm drain or curb, the overflow drains will terminate a minimum of 12 inches above ground floor level in a readily visible location which will not cause structural damage to the building.
- 3. When conditions of design dictate that both roof drains and overflow drains be underground, and determined by the Building Official, this condition exists. The Building Official may approve a secondary overflow with a minimum of 2 inch dipe size, piped from an inverted tee in the overflow drain to an outside, readily visible location, which will not cause structural damage to the building.
